Regional Vertebrate Animal Junior Division Form

Form required only if research involves vertebrate animals, defined as live, nonhuman vertebrate mammalian embryos or fetuses, tadpoles, bird and reptile eggs within 72 hours of hatching, and all other nonhuman vertebrates (including fish) at hatching or birth.

Your research plan should include a detailed description of what you will be doing in your experiment.

1. What kind of animal(s) are you using and how many will be involved?

2. Are there any possible risks involved for the animal? If yes, how will you prevent injury?

3. Who will supervise your experiment and what safety procedures will you use while experimenting?

For official use only:
